

Name of Student: Pushkar Sane		
Roll Number: 45		Lab Assignment Number: 6
Title of Lab Assignment: Develop applications using Aspect Oriented Programming with Spring.		
DOP: 20-10-2023		DOS: 21-10-2023
CO Mapped: CO4	PO Mapped: PO1, PO2, PO3, PO4, PO7, PO11, PSO1, PSO2	Signature:

Practical No. 6**Aim:**

1. Before and After Advice: Create a class deposit, withdraw, beneficiary, create an aspect verification, create method payment in deposit, drawout in withdraw and add beneficiary in beneficiary class the verification aspect has method account login() and account logout(). When you run the application the account login() method should execute before payment(), drawout() and add beneficiary () a account logout() method should run after payment(), drawout() and add beneficiary().
2. Use of point cuts: Create a class deposit, withdraw, beneficiary, create an aspect verification, create method payment in deposit, drawout in withdraw and add beneficiary in beneficiary class the verification aspect has method account login() and account logout(). When you run the application the account login() method should execute before payment(), drawout() and add beneficiary () a account logout() method should run after payment(), drawout() and add beneficiary () using point cuts.
3. Create a business class multiplier(int a, int b) which returns a product of two numbers and create an aspect AdderAfterReturnAspect using After-returning advice.
4. Create a voter class with attribute name and age create an exception check if age is less than 18 throw an exception. Create an aspect of illegalVoter with a method if the voter class throws an exception the illegalVoter aspect method will run .Use Afterthrowing Advice.

1. Create a class deposit, withdraw, beneficiary, create an aspect verification, create method payment in deposit, drawout in withdraw and add beneficiary in beneficiary class the verification aspect has method account login() and account logout(). When you run the application the account login() method should execute before payment(), drawout() and add beneficiary () a account logout() method should run after payment(), drawout() and add beneficiary().

Code:**Deposit.java**

```
package Practical 6;

public class Main {
    public void payment() {
        System.out.println("Payment method executed.");
    }
}
```

Withdraw.java

```
package Practical 6;

public class Withdraw {
    public void drawout() {
        System.out.println("Drawout method executed.");
    }
}
```

Beneficiary.java

```
package Practical 6;

public class Beneficiary {
    public void addBeneficiary() {
        System.out.println("Beneficiary added in Beneficiary class");
    }
}
```

VerificationAspect.java

```
package Practical6;

import org.aspectj.lang.annotation.Aspect;
import org.aspectj.lang.annotation.Before;
import org.aspectj.lang.annotation.After;

@Aspect

public class VerificationAspect {

    @Before("execution(* aopexample.Deposit.payment(..)) || execution(*
aopexample.Withdraw.drawout(..)) || execution(*
aopexample.Beneficiary.addBeneficiary(..)")
    public void accountLogin() {
        System.out.println("Account login");
    }

    @After("execution(* aopexample.Deposit.payment(..)) || execution(*
aopexample.Withdraw.drawout(..)) || execution(*
aopexample.Beneficiary.addBeneficiary(..)")
    public void accountLogout() {
        System.out.println("Account logout");
    }

}
```

Main.java

```
package Practical6;

import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

public class Main {

    public static void main(String[] args) {
        ApplicationContext context = new
        ClassPathXmlApplicationContext("applicationContext.xml");
        Deposit deposit = (Deposit) context.getBean("deposit");
        Withdraw withdraw = (Withdraw) context.getBean("withdraw");
        Beneficiary beneficiary = (Beneficiary) context.getBean("beneficiary");
        deposit.payment();
        withdraw.drawout();
    }
}
```

```
        beneficiary.addBeneficiary();
    }
}
```

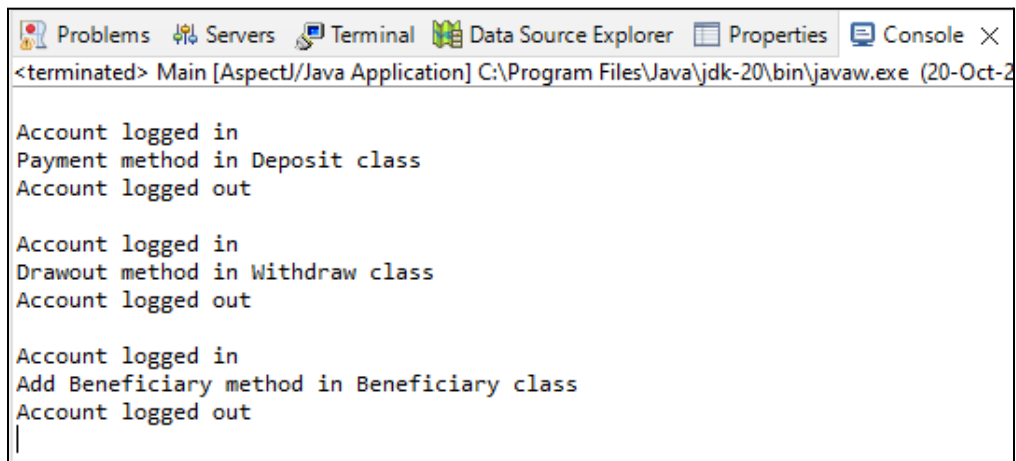

ApplicationContext.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<beans xmlns="http://www.springframework.org/schema/beans"
       xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
       xmlns:aop="http://www.springframework.org/schema/aop"
       xsi:schemaLocation="http://www.springframework.org/schema/beans
                           http://www.springframework.org/schema/beans/spring-beans.xsd
                           http://www.springframework.org/schema/aop
                           http://www.springframework.org/schema/aop/spring-aop.xsd">
    <!-- Define your classes -->
    <bean id="deposit" class="aopexample.Deposit" />
    <bean id="withdraw" class="aopexample.Withdraw" />
    <bean id="beneficiary" class="aopexample.Beneficiary" />
    <!-- Define the Aspect -->
    <bean id="verificationAspect" class="aopexample.VerificationAspect" />
    <aop:aspectj-autoproxy />
</beans>
```

Pom.xml

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
       xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
       xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
                           https://maven.apache.org/xsd/maven-4.0.0.xsd">
    <modelVersion>4.0.0</modelVersion>
    <groupId>Hello_world</groupId>
    <artifactId>SpringWorld</artifactId>
    <version>0.0.1-SNAPSHOT</version>
    <dependencies>
        <dependency>
            <groupId>junit</groupId>
```

```
<artifactId>junit</artifactId>
<!-- Important dependency -->
<version>4.11</version>
<scope>test</scope>
</dependency>
<dependency>
  <groupId>org.springframework</groupId>
  <artifactId>spring-aop</artifactId>
  <version>5.3.14</version>
</dependency>
<dependency>
  <groupId>org.springframework</groupId>
  <artifactId>spring-context</artifactId>
  <version>5.3.14</version>
</dependency>
<dependency>
  <groupId>org.aspectj</groupId>
  <artifactId>aspectjweaver</artifactId>
  <version>1.9.7</version>
</dependency>
</dependencies>
</project>
```

Output:

```
<terminated> Main [AspectJ/Java Application] C:\Program Files\Java\jdk-20\bin\javaw.exe (20-Oct-2
Account logged in
Payment method in Deposit class
Account logged out

Account logged in
Drawout method in Withdraw class
Account logged out

Account logged in
Add Beneficiary method in Beneficiary class
Account logged out
|
```

2. Use of point cuts: Create a class deposit, withdraw, beneficiary, create an aspect verification, create method payment in deposit, drawout in withdraw and add beneficiary in beneficiary class the verification aspect has method account login() and account logout(). When you run the application the account login() method should execute before payment(), drawout() and add beneficiary () a account logout() method should run after payment(), drawout() and add beneficiary () using point cuts.

Code:**Deposit.java**

```
package prac6b;

public class Deposit {
    public void payment() {
        System.out.println("Payment method executed.");
    }
}
```

Withdraw.java

```
package prac6b;

public class Withdraw {
    public void drawout() {
        System.out.println("Drawout method executed.");
    }
}
```

Beneficiary.java

```
package prac6b;

public class Beneficiary {
    public void addBeneficiary() {
        System.out.println("Beneficiary added in Beneficiary class");
    }
}
```

Verification.aj

```
package prac6b;

import org.aspectj.lang.annotation.Aspect;
import org.aspectj.lang.annotation.Before;
import org.aspectj.lang.annotation.After;
import org.aspectj.lang.annotation.Pointcut;

@Aspect

public aspect Verification {

    @Pointcut("execution(* aopexample.Deposit.payment()) || execution(*
aopexample.Withdraw.drawout()) || execution(*
aopexample.Beneficiary.addBeneficiary())")
    public void targetMethods() {}

    @Before("targetMethods()")
    public void accountLogin() {
        System.out.println("Account login.");
    }

    @After("targetMethods()")
    public void accountLogout() {
        System.out.println("Account logout.");
    }

}
```

Main.java

```
package prac6b;

import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

public class Main {

    public static void main(String[] args) {
        ApplicationContext context = new
        ClassPathXmlApplicationContext("Beans.xml");
        Deposit deposit = (Deposit) context.getBean("deposit");
        Withdraw withdraw = (Withdraw) context.getBean("withdraw");
        Beneficiary beneficiary = (Beneficiary) context.getBean("beneficiary");
    }
}
```

```
        deposit.payment();
        withdraw.drawout();
        beneficiary.addBeneficiary();
    }
}
```

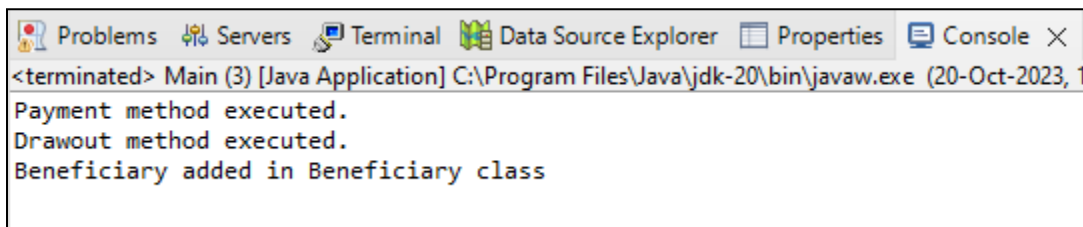

Beans.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<beans xmlns="http://www.springframework.org/schema/beans"

    <artifactId>spring-aop</artifactId>
    <version>5.3.14</version>
</dependency>
<dependency>
    <groupId>org.springframework</groupId>
    <artifactId>spring-context</artifactId>
    <version>5.3.14</version>
</dependency>
<dependency>
    <groupId>org.aspectj</groupId>
    <artifactId>aspectjweaver</artifactId>
    <version>1.9.7</version>
</dependency>
</dependencies>
</project>
```

Output:

```
<terminated> Main (3) [Java Application] C:\Program Files\Java\jdk-20\bin\javaw.exe (20-Oct-2023, 1:11:11 PM)
Payment method executed.
Drawout method executed.
Beneficiary added in Beneficiary class
```

3. Create a business class multiplier(int a, int b) which returns a product of two numbers and create an aspect AddAfterReturnAspect using After-returning advice.

Code:

Multiplier.java

```
package prac6c;

public class Multiplier {
    public int multiply(int a, int b) {
        return a * b;
    }
}
```

AddAfterReturnAspect.java

```
package prac6c;

import org.aspectj.lang.annotation.Aspect;
import org.aspectj.lang.annotation.AfterReturning;

@Aspect
public aspect AddAfterReturn {
    @AfterReturning(pointcut = "execution(* Multiplier.Multiplier.multiply(int, int))",
        returning = "result")
    public void addResultToProduct(int result) {
        System.out.println("After-returning advice: Result is " + result);
    }
}
```

MainApp.java

```
package prac6c;

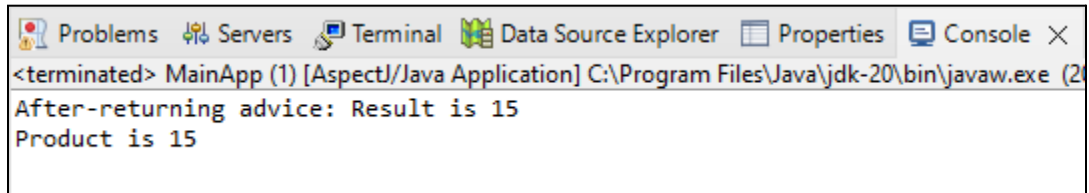

import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

public class MainApp {
    public static void main(String[] args) {
        ApplicationContext context = new
            ClassPathXmlApplicationContext("applicationContext.xml");
        Multiplier multiplier = (Multiplier) context.getBean("Multiplier");
        int result = multiplier.multiply(5, 3);
    }
}
```

```
        System.out.println("Product is " + result);
    }
}
```

ApplicationContext.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<beans xmlns="http://www.springframework.org/schema/beans"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:aop="http://www.springframework.org/schema/aop"
xsi:schemaLocation="http://www.springframework.org/schema/beans
    http://www.springframework.org/schema/beans/spring-beans.xsd
    http://www.springframework.org/schema/aop
    http://www.springframework.org/schema/aop/spring-aop.xsd">
<aop:aspectj-autoproxy />
<bean id="Multiplier" class="prac6c.Multiplier" />
<bean id="addAfterReturnAspect" class="prac6c.AddAfterReturnAspect" />
</beans>
```

Output:

```
<terminated> MainApp (1) [AspectJ/Java Application] C:\Program Files\Java\jdk-20\bin\javaw.exe (2)
After-returning advice: Result is 15
Product is 15
```

4. Create a voter class with attribute name and age create an exception check if age is less than 18 throw an exception. Create an aspect of illegalVoter with a method if the voter class throws an exception the illegalVoter aspect method will run .Use Afterthrowing Advice.

Code:**Voter.java**

```
package aop_voter;

public class voter {
    private String name;
    private int age;
    public void setName(String name) {
        this.name = name;
    }
    public void setAge(int age) {
        if (age < 18) {
            throw new IllegalArgumentException("Age must be at least 18 to
vote");
        } else {
            System.out.println("You are eligible to vote");
        }
        this.age = age;
    }
}
```

IllegalVoterAspect.java

```
package aop_voter;

import org.aspectj.lang.annotation.Aspect;
import org.aspectj.lang.annotation.AfterThrowing;

@Aspect
public class IllegalVoterAspect {
    @AfterThrowing(pointcut = "execution(* aop_voter.voter.setAge(int))", throwing =
"ex")
    public void handleIllegalVoterException(Exception ex) {
        System.out.println("After-throwing advice: " + ex.getMessage()); } }
```

MainApp.java

```
package aop_voter;

import org.springframework.context.ApplicationContext;
import org.springframework.context.support.ClassPathXmlApplicationContext;

public class MainApp {

    public static void main(String[] args) {
        try {
            ApplicationContext context = new
                ClassPathXmlApplicationContext("applicationContext.xml");
            voter voter1 = (voter) context.getBean("voter");
            voter1.setName("Pushkar");
            voter1.setAge(16);
        } catch (Exception e) {
            // Exception is handled by the aspect
        }
    }
}
```

ApplicationContext.xml

```
<?xml version="1.0" encoding="UTF-8"?>
<beans xmlns="http://www.springframework.org/schema/beans"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:aop="http://www.springframework.org/schema/aop"
    xsi:schemaLocation="http://www.springframework.org/schema/beans
        http://www.springframework.org/schema/beans/spring-beans.xsd
        http://www.springframework.org/schema/aop
        http://www.springframework.org/schema/aop/spring-aop.xsd">
    <aop:aspectj-autoproxy />
    <bean id="voter" class="aop_voter.voter" />
    <bean id="illegalVoterAspect" class="aop_voter.IllegalVoterAspect" />
</beans>
```

Pom.xml

```
<project xmlns="http://maven.apache.org/POM/4.0.0"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
    https://maven.apache.org/xsd/maven-4.0.0.xsd">
  <modelVersion>4.0.0</modelVersion>
  <groupId>Voter</groupId>
  <artifactId>AOP_voter</artifactId>
  <version>0.0.1-SNAPSHOT</version>
  <dependencies>
    <dependency>
      <groupId>junit</groupId>
      <artifactId>junit</artifactId> <!-- Important dependency -->
      <version>4.11</version>
      <scope>test</scope>
    </dependency>
    <dependency>
      <groupId>org.springframework</groupId>
      <artifactId>spring-aop</artifactId>
      <version>5.3.14</version>
    </dependency>
    <dependency>
      <groupId>org.springframework</groupId>
      <artifactId>spring-context</artifactId>
      <version>5.3.14</version>
    </dependency>
    <dependency>
      <groupId>org.aspectj</groupId>
      <artifactId>aspectjweaver</artifactId>
      <version>1.9.7</version>
    </dependency>
  </dependencies>
</project>
```

Output:

The screenshot shows a console window from an IDE. The title bar includes tabs for Problems, Servers, Terminal, Data Source Explorer, Properties, and Console. The console text reads: <terminated> MainApp [AspectJ/Java Application] C:\Program Files\Java\jdk-20\bin\javaw.exe (20-O After-throwing advice: Age must be at least 18 to vote. The text is displayed in a monospaced font with some color coding (blue for the package name, red for the exception message).

```
<terminated> MainApp [AspectJ/Java Application] C:\Program Files\Java\jdk-20\bin\javaw.exe (20-O  
After-throwing advice: Age must be at least 18 to vote.
```

Output:
